Linked:How
Everything Is Connected to Everything Else and What It Means

Notre Dame University physics professor Barabasi asserts that information, disease, knowledge and just about everything else is disseminated through a complex series of networks made up of interconnected hubs. For exceptionally well-read browsers, this book may be reminiscent of Steven Johnson's *Emergence*, with its emphasis on the mathematical underpinnings of social behavior or Malcolm Gladwell's *The Tipping Point*, which is mentioned. No matter, this book is lively, ambitious and intellectually stimulating.
